

## Task for Data Engineers

### About the Task

Create a scraper to get data from **one** of the following websites. The scraper file should be in the .py format and scraper must have a single python class which will be called to get the required data. The output should be in the csv format. Requirements:

- Only pick one of your trial tasks from the sources listed below  
Note: This is also a gauge of which type of data structures you are most comfortable with.
- Create scraper and **follow evaluation guidelines below**
- Build clean standards, data should contain metadata along with all the values present in the dataset.
- Simple way to present your data in map, graphs or charts to provide synthesis and show analytical skills in a short report

The submission will be evaluated on the quality of the data output as well as code. Scraper should be well optimized and able to handle large amounts of data. **The deadline for the task is 3 days.** Upload your code in your GitHub repo and push your code for us to evaluate.

Learn more about our data standards: <https://developer.taiyo.ai/api-doc/StandardLib/>

### **Pick only ONE (Either 1 or 2) from below**

**Projects and Tenders** (Fork Branch and Push your code to: <https://github.com/Taiyo-ai/pt-mesh-pipeline>)

Projects and Tenders Data Standards (to follow): <https://developer.taiyo.ai/api-doc/ProjectsandTenders/>

Scrap data for the following sources by getting details of all the tenders present on the website:

1. **China Procurement Sources:**
  - <https://www.chinabidding.com/en>
  - <http://www.ggzy.gov.cn/>
  - <http://en.chinabidding.mofcom.gov.cn/>
  - <https://www.cpppc.org/en/PPPyd.jhtml>
  - <https://www.cpppc.org:8082/inforpublic/homepage.html#/searchresult>
2. **E-procurement Government of India:** <https://etenders.gov.in/eprocure/app>

### **Evaluation Guidelines:**

**Evaluation is based on the following parameters:**

- Web Scraping Standards and Libraries used
  - Update requirements.txt for packages used in sample solution
- Modular, DRY Code
  - Follow Sample/Dummy Projects Directory/Packages Structure
  - Python Packages handling and client.py/main.py for calling different steps/module of code is must
- Config Params or Control Params using External ENV Variables, Unit Tests & Logging Standards
- Working solution with control of config/Params driven/triggered using client.py/main.py package file.
